- Step 8:

## ● Bitss-wp Configuration for Block IP

**IP Count Settings**

Count number will use to block that ip to access your website. Enter a count to block ip immediately (by default: 3). So when a ip count will be 3 it will block to access your website. You can modify as your own number. So, when IP Survey & Blocklist ip count will same and more than your input, the user will be blocked to access your website.

3

Save Count Settings **Step 1: Set up Ip count**

**Add IP to Blocklist**

Enter the IP you want to block. In below you also find the ip(s), which get blocked through bitss protection.

Enter the ip you want to block

ex 10.10.10.10

Enter a name for this ip (by default: Unknown)

Unknown

Enter a count to block ip immediately (by default: 3).

3

**Add to Blocklist** **Step 2: Add blocking ip, set a name to blocked ip then set count number for the ip then click add to blocklist to block that specific ip**

**IP Survey & Blocklist**

Show 10 entries Search:

No	IP	Name	Count	Date	Action
1	202.134.10.141	Unknown	1	2023-08-16 11:17:45	<b>Add to whitelist</b>

Showing 1 to 1 of 1 entries Previous 1 Next

**Get all the lists of blocked ip and later you can make them whitelist ip to click add to whitelist**

## ● Bitss-wp Configuration for Whitelist IP

**Add IP to Whitelist**

Enter the IP you want to unblock or add into whitelist. Remember that, the ip you enter will not count for any protection function.

Enter the ip you want to unblock

Enter IP to unblock

Enter a name for this ip (by default: Unknown)

Unknown

**Add ip to whitelist**

**Whitelist IP**

Show 10 entries Search:

No	IP	Name	Date	Action
No data available in table				

Showing 0 to 0 of 0 entries Previous Next

**View your whitelist ip lists here**

**To add ip unblock/whitelist put whitelist ip then set a name for it and click to add ip to whitelist**
